BSAP-22

प्रश्न पुरितका संख्या, Question Booklet No

Paper Code: 11

SUBJECT: Radiodiagnosis

(Broad Speciality)

अधिकतम अंक : 180 समय : 3.00 घण्टे Time: 3.00 Hours Maximum Marks: 180

प्रश्न-पत्र पुस्तिका के पेपर सील / पॉलिथिन बैग को खोलने पर परीक्षार्थी यह सुनिश्चित कर लें कि प्रश्न पुस्तिका संख्या तथा ओ.एम.आर उत्तर-पत्रक पर अंकित बारकोड समान हैं। इसमें कोई भिन्नता हो तो परीक्षार्थी वीक्षक से दूसरा प्रश्न-पत्र प्राप्त कर लें। ऐसा सुनिश्चित करने की जिम्मेदारी अभ्यर्थी की होगी।

On opening the paper seal /polythene bag of the Question Booklet the candidate should ensure that Question Booklet Number and Barcode of OMR Answer Sheet must be same. If there is any difference, candidate must obtain another Question Booklet from Invigilator. Candidate himself shall be responsible for ensuring this.

परीक्षार्थियों के लिए निर्देश

- 1. सभी प्रश्नों के उत्तर दीजिए।
- 2. सभी प्रश्नों के अंक समान हैं।
- 3. प्रत्येक प्रश्न का केवल एक ही उत्तर दीजिए।
- 4. एक से अधिक उत्तर देने की दशा में प्रश्न के उत्तर को गलत माना जाएगा।
- 5. प्रत्येक प्रश्न के चार वैकल्पिक उत्तर दिये गये हैं, जिन्हें क्रमशः 1, 2, 3, 4 अंकित किया गया है। अभ्यर्थी को सही उत्तर निर्दिष्ट करते हुए उनमें से केवल एक गोले अथवा बबल को उत्तर-पत्रक पर नीले बॉल प्वॉइंट पेन से गहरा करना है।
- 6. OMR उत्तर-पत्रक इस परीक्षा पुरितका के अन्दर रखा है। जब आपको परीक्षा पुस्तिका खोलने को कहा जाए, तो उत्तर-पत्रक निकाल कर ध्यान से केवल नीले बॉल प्वॉइंट पेन से विवरण भरें।
- 7. प्रत्येक गलत उत्तर के लिए प्रश्न अंक का 1/3 भाग काटा जायेगा। गलत उत्तर से तात्पर्य अशुद्ध उत्तर अथवा किसी भी प्रश्न के एक से अधिक उत्तर से है। किसी भी प्रश्न से संबंधित गोले या बबल को खाली छोडना गलत उत्तर नहीं माना जायेगा।
- 8. मोबाइल फोन अथवा इलेक्ट्रॉनिक यंत्र का परीक्षा हॉल में प्रयोग पूर्णतया वर्जित हैं। यदि किसी अभ्यर्थी के पास ऐसी कोई वर्जित सामग्री मिलती है, तो उसके विरुद्ध आयोग द्वारा नियमानुसार कार्यवाही की जायेगी।
- 9. कृपया अपना रोल नम्बर ओ.एम.आर. पत्रक पर सावधानीपूर्वक सही भरें। गलत अथवा अपूर्ण रोल नम्बर भरने पर 5 अंक कुल प्राप्तांकों में से काटे जा सकते हैं।
- 10. यदि किसी प्रश्न में किसी प्रकार की कोई मुद्रण या तथ्यात्मक प्रकार की त्रुटि हो, तो प्रश्न के हिन्दी तथा अंग्रेज़ी रूपान्तरों में से अंग्रेज़ी रूपान्तर मान्य होगा।

चेतावनी : अगर कोई अभ्यर्थी नकल करते पकडा जाता है या उसके पास से कोई अनधिकृत सामग्री पाई जाती है, तो उस अभ्यर्थी के विरुद्ध पुलिस में प्राथमिकी दर्ज कराते हुए विविध नियमों-प्रावधानों के तहत कार्यवाही की जाएगी। साथ ही विभाग ऐसे अभ्यर्थी को भविष्य में होने वाली विभाग की समस्त परीक्षाओं से विवर्जित कर सकता है।

INSTRUCTIONS FOR CANDIDATES

- Answer all questions.
- All questions carry equal marks.
- Only one answer is to be given for each question.
- If more than one answers are marked, it would be treated as wrong answer.
- Each question has four alternative responses marked serially as 1, 2, 3, 4. You have to darken only one circle or bubble indicating the correct answer on the Answer Sheet using BLUE BALL POINT PEN.
- The OMR Answer Sheet is inside this Test Booklet. When you are directed to open the Test Booklet, take out the Answer Sheet and fill in the particulars carefully with blue ball point pen only.
- 1/3 part of the mark(s) of each question will be deducted for each wrong answer. A wrong answer means an incorrect answer or more than one answers for any question. Leaving all the relevant circles or bubbles of any question blank will not be considered as wrong answer.
- Mobile Phone or any other electronic gadget in the examination hall is strictly prohibited. A candidate found with any of such objectionable material with him/her will be strictly dealt as per rules.
- Please correctly fill your Roll Number in O.M.R. Sheet. 5 Marks can be deducted for filling wrong or incomplete Roll Number.
- 10. If there is any sort of ambiguity/mistake either of printing or factual nature, then out of Hindi and English Version of the question, the English Version will be treated as

Warning: If a candidate is found copying or if any unauthorized material is found in his/her possession, F.I.R. would be lodged against him/her in the Police Station and he/she would liable to be prosecuted. Department may also debar him/her permanently from all future examinations.

इस परीक्षा पुस्तिका को तब तक न खोलें जब तक कहा न जाए। Do not open this Test Booklet until you are asked to do so.

RADIODIAGNOSIS

1.	Pancre	as is mainly supplied by -		
	(B	Splenic artery	(2)	Superior pancreaticoduodenal artery
	(3)	Inferior pancreaticoduodenal artery	(4)	Left gastric artery
2.	Follow	ring segment of Liver forms the boundary	y of C	ALOT's Triangle -
	(1)	Segment VII of Liver	(2)	Segment V of Liver
	(3)	Segment III of Liver	(4)	Segment IV of Liver
3.	Myoca	rdial specific biomarkers are -		
	(1)	CK MB – 1 & LDH – 1	(2)	CK MB – 2 & LDH – 1
	(3)	CK MB – 2 & LDH – 2	(4)	CK MM & CK BB
4.	Which	of these hormones use cAMP pathway?		
	(1)	Catecholamines	(2)	Steroid hormones
	(3)	Thyroid hormones	(4)	1, 25 DHCC
5.	Not tru	e about Testicular Feminization Syndron	ne is -	
	(1)	Sex Chromosome Karyotype is XY	(2)	Androgen resistance
	(3)	Leydig cells are deficient	(4)	No spermatogenesis
6.	MRI s	scan of a patient show well defined	multi	loculated expansile lesion with extensive
•	fluid-fl	uid/ haemorrhage levels in the metaphys	is of t	he long bone. The lesion probably is -
	(1)	Giant cell tumor	(2)	Aneurysmal bone cyst
	(3)	Chondroblastoma	(4)	Osteoblastoma
7.	For As	kin's tumor, all are true, except -		
	(1)	PNET of the thoracopulmonary region		
	(2)	Presents as soft tissue mass involving the	he che	est wall
	(3)	Resembles Ewing's Sarcoma		
	(4)	Commoner in the males		
8.	CT find	dings of a positive response to treatment	in a pa	atient of Osteosarcoma include all, except -
	(1)	Marked decrease in size or complete di	saffirr	nance of the soft tissue mass
	(2)	Improved delineation of the margins		
	(3)	Formation of rim of calcification in the	perip	hery
	(4)	Decreased calcification of the mass		

- 9. Choose the false statement -
 - (1) SLAP tear refers to labral tear stretching across superior portion of labrum.
 - (2) HAGL is the detachment of the capsule and inferior glenohumeral ligament from their anterior humeral attachment.
 - (3) ALPSA refers to tear of the periosteum of the anteroinferior glenoid and labrum rotated interiorly and displaced laterally.
 - (4) GLAD is the tear of anteroinferior glenoid labrum with injury to the glenoid articles cartilage.
- 10. Calcific tendinitis involves which muscle most frequently -
 - (1) Supraspinatus

(2) Teres minor

(3) Infra spinatus

- (4) Long head of biceps
- 11. Bucket handle tears result in all, except -
 - (1) Flipped meniscus sign
- (2) Ghost sign

(3) Double PCL sign

- (4) Double delta sign
- 12. A 25-year asthmatic man presented with fever, cough & shortness of breath. Antibiotic course has not improved his symptoms. Investigations performed resulted in positive skin test for *Aspergillus fumigatus* and elevated serum IgE level. Patient does not have previous history of sarcoidosis or Tuberculosis. Most likely HRCT finding is -
 - (1) Lower lobe predominance
- (2) Halo sign

(3) Air crescent sign

- (4) Central bronchiectasis
- 13. Not true about coarctation of aorta is -
 - (1) Most commonly affects aortic isthmus
 - (2) Femoral pulse are usually delayed & weakened
 - (3) Associated with Turner's syndrome
 - (4) Infantile type of coarctation is located just distal to ductus arteriosus
- 14. Following is not the limitation faced by conventional coronary angiography -
 - (1) Mild or non-stenotic CAD is not visualized
 - (2) Limited information regarding plague composition
 - (3) Limited information regarding degree of vascular remodelling
 - (4) Limited information regarding severity & length of stenosis

15.	In Aortic trauma, if irregular poorly defined Pseudoaneurysm is present, then the injury to aorta is of grade -				
	(1)	II b	(2)	TTT 1_	
	(3)	IV	(2)	III b	
16.		re of Benign ulcer on fluoroscopy is -	(4)	III a	
100			_		
	(1)	Presence of Hampton line crossing the	base o	of ulcer	
	(2)	Irregular nodular mucosal folds			
	(3)	Presence of Carman meniscus			
	(4)	Irregular shape of ulcer			
17.	Follow	wing gastric polyp have malignant potenti	al -		
	(1)	Hyperplastic polyps	(2)	Fundic g	gland polyps
	(3)	Adenomatous polyps	(4)	Hamarto	omatous polyps
18.	Match	the following congenital anomalies of pa	ancrea	s -	
		Column-I			Column-II
	(A)	Failure of lesion of dorsal & ventral anla	ige	(1)	Pancreatic hypoplasia
	(B)	Failure of normal rotation during develo	pment	, ,	Ectopic pancreatic tissue
	(C)	Deficiency in development of Dorsal and	lage	(3)	Annular pancreas
	(D)	Pancreatic tissue found in remote location	n	(4)	Pancreatic divisum
	(1)	A-4, B-3, C-1, D-2	(2)	A– 4, B-	-3, C-2, D-1
	(3)	A-1, B-2, C-3, D-4	(4)	A-2, B-	-1, C-4, D-3
19.	Both o	cortical & Medullary nephrocalcinosis car	ı be ca	aused by -	
	(1)	Hypervitaminosis D	(2)	Renal tu	berculosis
	(3)	Chronic glomerulonephritis	(4)	Primary	hyperoxaluria
20.		ving renal stones are Radiopaque -			
	(1)	Struvite stones	(2)	Urate sto	
21.	(3)	Xanthine stones	(4)	Indinavi	
21.		ving is the finding in patients with ovaria ement of retroperitoneal lymph nodes. A			
		2 cms, omental caking, extension of			
	parenc	chymal involvement.			
		orrect stage as per FIGO staging of ov ove			1 be -
	(1)	III C	(2)	III B	
	(3)	III A1	(4)	III A2	

22.	Urethrography shows bladder neck injury with extension into the posterior urethra Radiologically					
	contrast extravasation is seen in the pelvic extra peritoneal space with disruption of bladder neck.					
	Classif	y the injury based on modification by Co	ldmaı	n et al -		
	(1)	Type II	(2)	Type III		
	(3)	Type IV	(4)	Type V		
23.	True al	oout neurocysticercosis is -				
	(1)	The cysts are usually greater than 10 m	m in s	size.		
	(2)	Perilesional edema & contrast enhancer	ment i	s seen in the vesicular stage.		
	(3)	There is increase in perilesional edema in granular nodular stage.				
	(4)	No perilesional edema or contrast enha	nceme	ent is seen in nodular calcified stage.		
24.	False a	bout MR imaging of Multiple Sclerosis ((MS)	is -		
	(1)	Small periventricular lesions are best ap	ppreci	ated using FLAIR sequence.		
	(2)	Focal involvement of periventricular w	hite n	natter in frontal lobe is typical of MS.		
	(3)	Corpus callosum is region that is most often vulnerable to demyelination in MS.				
	(4)	Juxtacortical lesion involving subcortical 'U fibres' are seen in majority of patients with				
		MS.				
25.	Staine	d glass appearance on T1W MRI is seen	in -			
	(1)	Endometrioma	(2)	Serous Cystadenoma		
	(3)	Mucinous Cystadenoma	(4)	Endometrial Carcinoma		
26.	Most c	common site of carcinoma metastatic to the	he eye	e is -		
	(1)	Sclera	(2)	Cornea		
	(3)	Choroid	(4)	Retina		
27.	All are	e true about Hashimoto's thyroiditis, exce	ept -			
	(1)	Thyroid appears more hypoechoic than	a noi	mal gland		
	(2)	Pseudolobulated appearance is seen				
	(3)	Micronodulation				
	(4)	(4) Hypervascularity similar to thyroid inferno is never seen				
[11]	•	Page 5 of	32			

(2) Increased activity in enlarged spleen (3) Increased bone marrow uptake (4) Decreased activity in liver 29. In Renal scintigraphy using Technetium-99m DMSA scan, following is true, except - (1) 60% of administered dose is taken up by proximal tubular cells mainly by filtration and tubular reabsorption. (2) Tracer accumulates in cortical tubules within 1 hour & remains for 24 hours. (3) In early phase of Acute pyelonephritis there is reduced tracer uptake due to ischaemia. (4) In later stage of Acute pyelonephritis accumulation of isotope may occur due to associated tubular obstruction. 30. Tungsten is used as filament, although - (1) It is less efficient emitting material (2) It can be drawn into thin wire (3) It has high melting point (4) It has little tendency to vaporize 31. Small tungsten target is bonded to much larger copper portion of anode. The correct reason is - (1) as it increases the melting point (2) makes it more efficient for production of X-rays (3) More efficient absorption of heat (4) Facilitates heat dissipation 32. True about Bremsstrahlung is - (A) It is also known as characteristic radiation. (B) It involves collision between high speed electron & electron in the shell of target tungste atom. (1) Both statements A & B are true (2) Both statement A & B are false (3) Only A is true (4) Only B is true 33. In N – type semiconductor, impurity added can be - (1) Antimony (2) Indium (3) Gallium (4) Aluminium		(1)	Increased activity in enlarged caudate	lobe	
 (4) Decreased activity in liver 29. In Renal scintigraphy using Technetium-99m DMSA scan, following is true, except - (1) 60% of administered dose is taken up by proximal tubular cells mainly by filtration and tubular reabsorption. (2) Tracer accumulates in cortical tubules within 1 hour & remains for 24 hours. (3) In early phase of Acute pyelonephritis there is reduced tracer uptake due to ischaemia. (4) In later stage of Acute pyelonephritis accumulation of isotope may occur due to associated tubular obstruction. 30. In N – type semiconductor, impurity added can be - (1) Antimony (2) Indium (3) Gallium (4) Aluminium		(3)	In early phase of Acute pyelonephritis	there	is reduced tracer uptake due to ischaemia.
(1) It is less efficient emitting material (2) It can be drawn into thin wire (3) It has high melting point (4) It has little tendency to vaporize 31. Small tungsten target is bonded to much larger copper portion of anode. The correct reason is - (1) as it increases the melting point (2) makes it more efficient for production of X-rays (3) More efficient absorption of heat (4) Facilitates heat dissipation 32. True about Bremsstrahlung is - (A) It is also known as characteristic radiation. (B) It involves collision between high speed electron & electron in the shell of target tungste atom. (1) Both statements A & B are true (2) Both statement A & B are false (3) Only A is true (4) Only B is true 33. In N – type semiconductor, impurity added can be - (1) Antimony (2) Indium (3) Gallium (4) Aluminium		(4)		tis ac	cumulation of isotope may occur due to
(3) It has high melting point (4) It has little tendency to vaporize 31. Small tungsten target is bonded to much larger copper portion of anode. The correct reason is - (1) as it increases the melting point (2) makes it more efficient for production of X-rays (3) More efficient absorption of heat (4) Facilitates heat dissipation 32. True about Bremsstrahlung is - (A) It is also known as characteristic radiation. (B) It involves collision between high speed electron & electron in the shell of target tungster atom. (1) Both statements A & B are true (2) Both statement A & B are false (3) Only A is true (4) Only B is true 33. In N – type semiconductor, impurity added can be - (1) Antimony (2) Indium (3) Gallium (4) Aluminium	30.	Tungs	ten is used as filament, although -		
 Small tungsten target is bonded to much larger copper portion of anode. The correct reason is - as it increases the melting point makes it more efficient for production of X-rays More efficient absorption of heat Facilitates heat dissipation True about Bremsstrahlung is - It is also known as characteristic radiation. It involves collision between high speed electron & electron in the shell of target tungster atom. Both statements A & B are true Only A is true Only B is true In N - type semiconductor, impurity added can be - Antimony Indium Gallium Aluminium		(1)	It is less efficient emitting material	(2)	It can be drawn into thin wire
(1) as it increases the melting point (2) makes it more efficient for production of X-rays (3) More efficient absorption of heat (4) Facilitates heat dissipation 32. True about Bremsstrahlung is - (A) It is also known as characteristic radiation. (B) It involves collision between high speed electron & electron in the shell of target tungste atom. (1) Both statements A & B are true (2) Both statement A & B are false (3) Only A is true (4) Only B is true 33. In N – type semiconductor, impurity added can be - (1) Antimony (2) Indium (3) Gallium (4) Aluminium		(3)	It has high melting point	(4)	It has little tendency to vaporize
(2) makes it more efficient for production of X-rays (3) More efficient absorption of heat (4) Facilitates heat dissipation 32. True about Bremsstrahlung is - (A) It is also known as characteristic radiation. (B) It involves collision between high speed electron & electron in the shell of target tungster atom. (1) Both statements A & B are true (2) Both statement A & B are false (3) Only A is true (4) Only B is true 33. In N – type semiconductor, impurity added can be - (1) Antimony (2) Indium (3) Gallium (4) Aluminium	31.	Small	tungsten target is bonded to much larger	coppe	er portion of anode. The correct reason is -
 (3) More efficient absorption of heat (4) Facilitates heat dissipation 32. True about Bremsstrahlung is - (A) It is also known as characteristic radiation. (B) It involves collision between high speed electron & electron in the shell of target tungster atom. (1) Both statements A & B are true (2) Both statement A & B are false (3) Only A is true (4) Only B is true 33. In N – type semiconductor, impurity added can be – (1) Antimony (2) Indium (3) Gallium (4) Aluminium 		(1)	as it increases the melting point		
 (4) Facilitates heat dissipation 32. True about Bremsstrahlung is - (A) It is also known as characteristic radiation. (B) It involves collision between high speed electron & electron in the shell of target tungster atom. (1) Both statements A & B are true (2) Both statement A & B are false (3) Only A is true (4) Only B is true 33. In N – type semiconductor, impurity added can be - (1) Antimony (2) Indium (3) Gallium (4) Aluminium 		(2)	makes it more efficient for production	of X-1	ays
32. True about Bremsstrahlung is - (A) It is also known as characteristic radiation. (B) It involves collision between high speed electron & electron in the shell of target tungster atom. (1) Both statements A & B are true (2) Both statement A & B are false (3) Only A is true (4) Only B is true 33. In N – type semiconductor, impurity added can be - (1) Antimony (2) Indium (3) Gallium (4) Aluminium		(3)	More efficient absorption of heat		
 (A) It is also known as characteristic radiation. (B) It involves collision between high speed electron & electron in the shell of target tungste atom. (1) Both statements A & B are true (2) Both statement A & B are false (3) Only A is true (4) Only B is true 33. In N – type semiconductor, impurity added can be - (1) Antimony (2) Indium (3) Gallium (4) Aluminium 		(4)	Facilitates heat dissipation		
(B) It involves collision between high speed electron & electron in the shell of target tungster atom. (1) Both statements A & B are true (2) Both statement A & B are false (3) Only A is true (4) Only B is true 33. In N – type semiconductor, impurity added can be – (1) Antimony (2) Indium (3) Gallium (4) Aluminium	32.	True a	bout Bremsstrahlung is -		
atom. (1) Both statements A & B are true (2) Both statement A & B are false (3) Only A is true (4) Only B is true 33. In N – type semiconductor, impurity added can be – (1) Antimony (2) Indium (3) Gallium (4) Aluminium		(A)	It is also known as characteristic radiation	on.	
(1) Both statements A & B are true (2) Both statement A & B are false (3) Only A is true (4) Only B is true 33. In N – type semiconductor, impurity added can be – (1) Antimony (2) Indium (3) Gallium (4) Aluminium		(B)	It involves collision between high speed	i elect	ron & electron in the shell of target tungsten

49.	What ty	pe of vascular malformation is seen in 1	00%	of patients with PHACE(s) syndrome?
	(1)	Congenital Hemangioma	(2)	Infantile Hemangioma
	(3)	Venous Malformation	(4)	Arteriovenous Malformation
50.	Compa	red to AQP4-IgG positive NMOSD my	elitis,	MOG-IgG positive myelitis is more often
	seen in	which segment(s) of the spinal cord?		
	(1)	Cervicomedullary	(2)	Cervical and cervicothoracic
	(3)	Thoracic	(4)	Thoracolumbar and conus
51.	Which	findings(s) are most specific for spinal c	ord in	farct in patients with acute myelopathy?
	(1)	Anterior horn hyperintense signal on Ta	2-weig	ghted imaging.
	(2)	Holocord hyperintense signal on T2-we	eighted	l imaging.
	(3)	Vertebral body infarction in conjunctio	n with	same level cord signal abnormality.
	(4)	Nonexpansile intramedullary enhancem	nent in	the anterior horns of the spinal cord.
52.	What s	tructure connects the nasal vault to the p	terygo	palatine fossa?
	(1)	Sphenopalatine foramen	(2)	Palatine canal
	(3)	Pterygomaxillary fissure	(4)	Foramen rotundum
53.	Which	structure normally drains into the right of	stiom	eatal unit?
	(1)	Right sphenoid sinus	(2)	Left sphenoid sinus
	(3)	Right anterior ethmoid air cells	(4)	Right posterior ethmoid air cells
54.	Accord	ling to the 2018 AHA recommendation	ons, w	which of the following imaging should be
	utilized	I in an acute stroke patient with large ves	ssel oc	clusion within 6 to 24 hours?
	(1)	Collateral imaging	(2)	Multiphase CT angiogram
	(3)	CT or MR perfusion imaging	(4)	4D CT angiogram
55.	Which	immunohistochemical marker may be u	ised to	distinguish a hemangioma from a vascular
	malfor	mation?		
	(1)	CD15	(2)	Cytokeratin
	(3)	GLUT-1	(4)	Alpha fetoprotein

 Increased SNR Faster imaging Improved tissue contrast (e.g. gray-white junction) Improved Bo homogeneity Which imaging feature distinguishes ecchordosis physaliphora from a clival chordoma? Midline location T2 hyperintense signal Restricted diffusion Lack of enhancement Hemosiderin staining on MRI is a sign of what age haemorrhage in a patient with a history of trauma? Hyperacute (hours or less) Acute (hours to days) Subacute (days to weeks) Chronic (weeks to months, or year) Spinal cord herniation Arachnoid cyst Arachnoid adhesions Arachnoid web Prevertebral soft tissue swelling in the setting of calcifications immediately anterior to the midline of Cl and C2 is suggestive of what process? Calcific tendinitis of the longus colli tendons Retropharyngeal cellulitis/abscess Rheumatoid arthritis Tuberculosis Which of the following statement about subarachnoid hemorrhage (SAH) is false? 80-85% of non-traumatic subarachnoid hemorrhages are due to an aneurysm. A non-contrast enhanced CT is recommended for acute (less than 24 hours old) suddenonset headaches, looking for subarachnoid hemorrhage is strongly associated with aneurysmal SAH. Diagnostic cerebral angiogram is the investigation of choice to demonstrate intracranial aneurysm. 	50.	All OI	of the following are advantages of ultranigh magnetic field for clinical MRI, except -

62.	Which of the following entities is associated with Moya-Moya syndrome?			
	(1)	Neurofibromatosis type 2	(2)	Down syndrome
	(3)	Ataxia telangiectasia	(4)	Charcot-Marie-Tooth disease
63.	Which	branches of the ECA form the anastomo	sis wi	th the ophthalmic artery?
	(1)	The internal maxillary and the facial ar	tery	
	(2)	The lingual and the occipital arteries		
	(3)	The superior thyroid and ascending ph	arynge	eal arterie
	(4)	The internal maxillary and superficial	tempo	ral arteries
64.	What	is the most common and most ce	phalic	of the persistent carotid-vertebrobasilar
	anasto	moses?		
	(1)	Persistent hypoglossal artery	(2)	Persistent stapedial artery
	(3)	Persistent trigeminal artery	(4)	Proatlantal intersegmental artery
65.	A 20-	year-old woman with a normal quadrup	le scr	een has a sonogram at 18-weeks gestational
	age an	d is found to have bilateral choroid plexi	us cysi	ts. What is the most appropriate next step?
	(1)	Perform an amniocentesis to assess for	r trisor	ny 21.
	(2)	Perform a chorionic villous sampling t	o asse	ss for trisomy 18.
	(3)	Perform a fetal survey to assess for mo	orphol	ogic abnormalities.
	(4)	No further follow up is needed.		
66.	Whicl	n of the following is TRUE concerning sa	acroco	ccygeal teratomas?
	(1)	Excision of the lower sacrum is necess	sary to	prevent recurrence.
	(2)	Currarino triad includes sacrococ	cygeal	teratoma sacral defect and posterior
		meningocele.		
	(3)	Sacrococcygeal teratomas contain eler	nents	of all three germ cell layers.
	(4)	A type IV lesion is located below the	sacrun	n and is visible externally.
67.	Which	n of the following ovarian masses i	n chi	ldren is associated with abnormal sexual
	devel	opment?		
	(1)	Cystic teratoma	(2)	Dysgerminoma
	(3)	Granulosa cell tumor	(4)	Endodermal sinus tumor
			-	
[11]	[11] • Page 11 of 32			

68.	In a case of anaphylaxis, the proper dose of adrenaline injection is -			
	(1)	1 mL of 1:1000 adrenaline IV	(2)	0.5 mL of 1:1000 adrenaline IM
	(3)	1 mL of 1:10,000 adrenaline IV	(4)	0.5 mL of 1:10,000 adrenaline IM
69.	Which	of the following is not a HRCT feature	of No	nspecific Interstitial Pneumonia (NSIP)?
	(1)	Basal and peripheral predominance of	groun	d-glass opacity and reticulation
	(2)	Extensive honey combing		
	(3)	Relative subpleural sparing in the dors	sal regi	ons of the lower lobes
	(4)	Mild fibrosis, traction bronchiectasis a	ınd inte	erlobular interstitial thickening
70.		lly enlarged pancreas with loss of signal the pancreas which shows a characteris		sity on T1W images with a hypointense rim ayed enhancement is suggestive of -
	(1)	Chronic pancreatitis	(2)	Hereditary pancreatitis
	(3)	Pancreatic adenocarcinoma	(4)	Autoimmune pancreatitis
71.	Comm	onest site for aortic trauma is -		
	(1)	Ascending aorta	(2)	Proximal DTA close to ductal remnant
	(3)	Juxta renal abdominal aorta	(4)	Aortic bifurcation
72.	Physic	ian who performed the first angioplasty	was -	
	(1)	Charles Dotter	(2)	Thomas Dotter
	(3)	John Dotter	(4)	James Dotter
73.	The "e	ars of lynx" sign is describe for which or	f the fo	ollowing conditions -
	(1)	Amyotrophic lateral sclerosis	(2)	Hereditary spastic paraplegia
	(3)	Spinocerebellar ataxia	(4)	Wilson disease
74.	Revers	al agent for heparin is -		
	(1)	Prothrombin complex concentrates	(2)	Protamine
	(3)	FFP	(4)	Vitamin K
75.	Method	d of reduction of radiation dose to operate	tor is -	
	(1)	Use magnification		
	(2)	Use more continuous fluoroscopy than	pulsed	d fluoroscopy
	(3)	Use extension tubing for injectors		
	(4)	Avoid under table shields		

76.	Which	of the following is a stochastic effect of	radiati	on?
	(1)	Cancer	(2)	Cataract
	(3)	Infertility	(4)	Skin burns
77.	Chemic	cal name for "Glue" is -		
	(1)	N acetyl cyanoacrylate		
	(2)	N butyl cyanoacrylate		
	(3)	N methyl cyanoacrylate		
	(4)	None		
78.	Which	of the following is not a collateral pathw	ay be	tween mesenteric vasculature?
	(1)	Arc of Riolan		
	(2)	Marginal artery of Drummond		
	(3)	Winslow's pathway		
	(4)	Arc of Buhler		
79.	If a pat	ient has a duplicated IVC, the ideal locat	tion of	an IVC filter would be -
	(1)	Infrarenal right IVC		
	(2)	Suprarenal IVC		
	(3)	Infrarenal left IVC		
	(4)	Filter is contraindicated and thromboly	sis sh	ould be performed
80.	Regard	ling Pulmonary Arteriovenous Malforma	tions	(PAVMs), which of the following is true?
	(1)	They cause left-to-right shunt		
	(2)	Majority of patients with PAVMs have	hered	litary hemorrhagic telangiectasia
	(3)	Majority of PAVMs occur in upper lob	es	
	(4)	Polyvinyl alcohol particles are the emb	olisin	g agent of choice
81.	Identif	y the false statement -		
	(1)	Bronchial arteries arise most commonl	y fron	a descending aorta at the T5/T6 level.
	(2)	Bronchial arteries also supply blood to	the es	sophagus.
	(3)	Rasmussen's aneurysm usually arises f	from t	he bronchial arteries.
	(4)	When searching for a cause of massialso be examined.	ive he	moptysis the subclavian arteries should
Г11Т	•	Page 13 of	32

	splenic	capsule. This injury is classified into w	hich g	rade as per 2018 AAST classification -
				rges and become denser and confined to the
				cing lesion at the periphery of mid pole of
87.				oad traffic accident. Contrast CT abdomen
	(3)	Right atrial appendages	(4)	Main pulmonary artery
	(1)	Aortic knuckle	(2)	Left atrial appendages
86.		. Mogul sign on frontal chest radiograph i		
	(3)	Nonspecific interstitial pneumonia	(4)	Chronic sarcoidosis
	(1)	Usual interstitial pneumonia	(2)	Hypersensitivity pneumonitis
85.		density sign is seen in -		
	(4)	Foramen rotundum – maxillary division		
	(3)	Internal auditory meatus – VII th crania		a.
	(2)	Inferior orbital fissure – III rd cranial ne		
	(1)	Superior orbital fissure – VI th cranial r	erve.	
04.	nerves		it skul	l foramina which transmit the named cranial
84.	(4)	Radiation equivalent dose of lens of e	,	•
	(4)	embryo/fetus should not exceed.		
	(3)	For pregnant radiation workers, af	ter de	eclaration of pregnancy 5 mSv on the
	(2)	The annual dose for the public should	not ex	ceed 10 mSv under any circumstance.
	(1)	Whole body occupational radiation ex	posure	e must not exceed 20 mSv/ year.
83.	Regard	ding AERB guidelines for "dose limitati	on", id	lentify the true statement -
	(4)	Furosemide		
	(3)	Mannitol		
	(2)	Saline infusion to maintain adequate p	re pro	cedure hydration
	(1)	N-acetyl cysteine		
82.		th of the following is the best prophylactic agent/method to prevent contrast induced ropathy?		

	(1)	Largest lymphatic vessel					
	(2)	Superior continuation of the cisterna chyli at the T10-L3 level					
	(3)	Enters the thoracic cavity through the oesophageal hiatus					
	(4)	It crosses right to left in upper thorax b	efore	opening into left internal jugular vein			
89.	The de	tector used in the TLD is -					
	(1)	CaSO4:Dy	(2)	Gas detector			
	(3)	CdSO4	(4)	Ag2O			
90.	Choose	e the true statement -					
	(1)	The CT number is based on the linear a	ttenu	ation coefficient of the water only.			
	(2)	The CT number is based on the linear	r atte	nuation coefficient of the water and the			
		material of interest.					
	(3)	The CT number is based on the line	ear at	tenuation coefficient of the material of			
		interest only.					
	(4)	The CT number is never based on the	linear	attenuation coefficient of the material of			
		interest.					
91.	A pati	ent undergoing barium swallow is expo	sed v	vith optimal tube potential and tube current			
	param	eters. The temporal resolution is observ	ed to	be inadequate. Which of the following can			
	impro	vise the temporal resolution further?					
	(1)	Increase in tube potential	(2)	Increase in tube current			
	(3)	Decrease in tube potential	(4)	Increase in pulse rate			
92.	In MR	I, noise can be decreased by -					
	(1)	Long TR	(2)	Short TR			
	(3)	Long TE	(4)	Smaller voxel sizes			
93.	Renal	cortical nephrocalcinosis is seen in all of	the fo	ollowing, except:			
	(1)	Ethylene glycol poisoning	(2)	Chronic transplant rejection			
	(3)	Snake bite	(4)	Cystinuria			
[11]	[11] • Page 15 of 32						

Which of the following is false with regards to thoracic duct?

88.

- 94. In bladder exstrophy, which of the following is incorrect?
 - (1) There is frequently a bifid clitoris in affected females.
 - (2) There is diastasis of the pubic symphysis.
 - (3) In closed exstrophy, the mucosa of the bladder is continuous with the skin.
 - (4) There is a frequent association with cryptorchidism.
- 95. Regarding pheochromocytoma, which of the following statement is incorrect?
 - (1) The incidence of malignancy is lower in extra adrenal compared to adrenal pheochromocytoma.
 - (2) Extra adrenal tumors occur most commonly at the aortic bifurcation.
 - (3) There is an association with parathyroid adenoma.
 - (4) MIBG scintigraphy has a 10% false negative rate for tumor detection.
- **96.** Regarding renal neoplasms, which of the following is correct?
 - (1) Oncocytomas can be confidently differentiated from renal cell carcinomas on imaging.
 - (2) Calcification is seen in majority of oncocytomas.
 - (3) Juxtaglomerular cell tumors (reninomas) are typically vascular tumors.
 - (4) Renal involvement is more common in non-Hodgkin's lymphoma than Hodgkin's lymphoma.
- 97. In pheochromocytoma, elevated level of amylase is due to -
 - (1) Damaged pulmonary endothelium
 - (2) Associated pancreatitis
 - (3) Sialolithiasis
 - (4) All of the above
- 98. Which of the following statement regarding osteomalacia is incorrect?
 - (1) Looser's zones show increased uptake on radionuclide bone scan.
 - (2) Looser's zones are most commonly seen along the medial border of the humeral neck.
 - (3) There is an association with Neurofibromatosis (NF).
 - (4) It causes loss of lamina dura of the teeth.

- 99. Which of the following is incorrect regarding osteosarcoma?
 - (1) There is an association with pineoblastoma.
 - (2) There is an increased incidence in osteopetrosis.
 - (3) Telangiectatic osteosarcoma typically demonstrates fluid-fluid levels on MRI.
 - (4) It frequently metastasizes to other bones.
- 100. Which of the following can present as a spiculated lesion on mammography?
 - (1) Fat necrosis
 - (2) Medullary carcinoma
 - (3) Cystosarcoma phyllodes
 - (4) Plasma cell mastitis
- 101. Which of the following is incorrect about calcifications detected on mammography?
 - (1) Skin calcifications typically have central lucent centres.
 - (2) Milk of calcium has a typical appearance on the cranio-caudal view.
 - (3) Suture calcifications are usually linear in appearance.
 - (4) Bilateral scattered punctate calcifications are probably benign.
- 102. Which of the following is incorrect regarding MRI and heart disease?
 - (1) Infarcted myocardium is typically high signal on T2-weighted imaging.
 - (2) There is marked enhancement of infarcted myocardium following intravenous gadolinium contrast.
 - (3) Infarcted myocardium appears low signal on post contrast inversion recovery sequences.
 - (4) In acute myocardial infarction, systolic wall thickening is reduced.
- **103.** Regarding Total Anomalous Pulmonary Venous Drainage (TAPVD), which of the following is incorrect?
 - (1) The supracardiac type is the most common.
 - (2) The left atrium is not enlarged.
 - (3) The infracardiac type may drain into the hepatic veins.
 - (4) Pulmonary edema in the presence of a normal size heart is a feature of cardiac type TAPVD.

104.	Which	of the following ultrasonographic signs	is not	seen in full thickness rotator cuff tear of the			
	should	ler?					
	(1)	Non visualization of the rotator cuff.					
	(2)	Full thickness hyperechogenicity of the	rotat	or cuff.			
	(3)	Focal thinning of the rotator cuff.					
	(4)	Fluid in the subacromial bursa.					
105.	Regard	ling choanal atresia, which of the following	ing is	incorrect?			
	(1)	It is usually due to membranous obstru	ction (of choanae.			
	(2)	Urgent treatment is required if the cond	lition	is bilateral.			
	(3)	It is associated with cleft face, nose and	d palat	te.			
	(4)	The vomer is typically thickened on C	Г.				
106.	Which	of the following is "hot" on a Tc-99m M	IDP b	one scan?			
	(1)	Fibrous dysplasia	(2)	Acute fracture (first 12 hours after injury)			
	(3)	Bone island	(4)	Multiple myeloma			
107.	All of	the following chest conditions take up G	a-67 c	itrate avidly except -			
	(1)	Kaposi's sarcoma	(2)	Pneumocystis carinii pneumonia			
	(3)	Lymphoma	(4)	Bacterial pneumonia			
108.	Which	of the following lesions may show signa	al loss	on out-of-phase (opposed phase) MRI?			
	(1)	Hepatocellular carcinoma	(2)	Cholangiocarcinoma			
	(3)	Lymphoma	(4)	Hemangioma			
109.	All of	the following are neurocutaneous syndro	mes, e	except -			
	(1)	Ataxia telangiectasia					
	(2)	Gomez-Lopez-Hernandez syndrome					
	(3)	Nijmegen breakage syndrome					
	(4)	Peutz-Jeghers syndrome					
110.		•	nse a	ssessment criteria for GIST after imatinib			
	treatme						
	(1)	WHO	(2)	RECIST			
	(3)	CHOI	(4)	PERSIST			

111.	All of t	he following are imaging findings of gro	oove p	ancreatitis, except -
	(1)	Soft tissue density within the pancreati	coduo	denal groove.
	(2)	Small cystic lesions along the medial v	vall of	duodenum.
	(3)	An intense early enhancement of the le	sion.	
	(4)	Biliary strictures seen in 50% cases.		
112.	A 2-ye	ar-old has an elbow radiograph perform	ned fo	sllowing a fall. Which one of the following
	epiphy	sis should be visible?		
	(1)	Capitellum	(2)	Medial epicondyle
	(3)	Olecranon	(4)	Radial head
113.	A conc	certina like arrangement of small bowel	loops	with a narrow posterior base, adherence of
	the boy	wel to the anterior abdominal wall are the	e imag	ring findings seen in -
	(1)	Mesenteric lipodystrophy	(2)	Spontaneous bacterial peritonitis
	(3)	Sclerosing encapsulating peritonitis	(4)	Mesenteric oedema
114.	How w	vill you retrieve a broken catheter in mai	n puln	nonary artery?
	(1)	Through femoral artery	(2)	Through femoral vein
	(3)	Through radial artery	(4)	Any of the above routes
115.	Which	of the following statement is incorrect a	bout J	uvenile angiofibromas?
	(1)	Biopsy is contraindicated.		
	(2)	Widening of the pterygopalatine fossa	is only	y seen in advanced cases.
	(3)	Is the commonest benign nasopharyng	eal tur	nor.
	(4)	Invasion of the sphenoid sinus occurs	in up t	o two thirds of cases.
116.	A 18-y	vear-old female presented with hip pain	and w	as found to have a well-defined lesion in her
	greater	trochanter. Which was ultimately pr	oven	to be a chondroblastoma. What pattern of
	minera	ilisation is typical?		
	(1)	Normal surrounding bone, no minerali	sation	in lesion.
	(2)	Normal surrounding bone, rings and a	rcs wit	hin lesion.
	(3)	Surrounding sclerosis, no mineralisation	on in l	esion.
	(4)	Surrounding osteopenia, dense scleros	is witł	nin lesion.
[11]	•	Page 19 of	32	

117.	Which	of following is false with respect to inva	asive p	oulmonary aspergillosis?
	(1)	More commonly associated with sever	rely ir	nmunocompromised patients & transplant
		recipients.		
	(2)	On CT a classical halo sign is seen wi	th der	se central nodule surrounded by a halo of
		ground glass opacity.		
	(3)	Air crescent sign is an early finding.		
	(4)	In some cases may invade the wall of t	rachea	a or bronchi.
118.	A prev	viously healthy male has been diagnose	d with	a active primary tubercular infection. What
	feature	on imaging would suggest primary rathe	er thai	reactivated pulmonary tuberculosis?
	(1)	Cavity formation	(2)	Calcification
	(3)	Non-specific pneumonitis	(4)	Tuberculoma
119.	A 52-y	year-old gentleman with exertional dysp	noea	was referred by his cardiologist for a stress
	cardia	e MR study. His medical history inclu	udes 1	hyperlipidaemia, asthma and hypertension.
	Which	of the following pharmacological stress	agent	s is best suited for this patient?
	(1)	Adenosine	(2)	Dobutamine
	(3)	Atenolol	(4)	Verapamil
120.	Pentalo	ogy of Cantrell consist of -		
	(1)	Umbilical hernia	(2)	Thoracoabdominal ectopia cordis
	·(3)	Dextrocardia	(4)	Pericardial effusion
121.	A 20-y	ear-old male with a recent history of me	dullo	plastoma now present with vague abdominal
	pain,	PR bleeding and weight loss. Innu	merat	le colonic polyps are demonstrated on
	colono	scopy. What is the most likely unifying o	diagno	sis?
	(1)	Familial adenomatous polyposis	(2)	Turcot syndrome
	(3)	Gardner syndrome	(4)	Chronic inflammatory bowel disease
122.	A you	ng female with seizures and skin lesions	show	s B/L hypointense signals on T1 and T2Wl
	in B/L	amygdala, diagnosis is -		
	(1)	lipoid proteinosis	(2)	tuberous sclerosis
	(3)	Sturge-Weber syndrome	(4)	incontinentia pigmenti
[11]	•	Page 20 of	32	

123.	27 wee	weeks twin pregnancy, twin A show normal length and curvature in the lower extremities,						
	twin B	shows short and vertically bowed tibia and femur absent fibula, talipes equinovarus and						
	hypopl	astic scapulae, most likely diagnosis is -						
	(1)	Osteogenesis imperfecta						
	(2)	Campomelic dysplasia						
	(3)	Hypophosphatasia congenita						
	(4)	Heterozygous achondroplasia						
124.	The cri	ne criteria for malignancy on dynamic MR mammogram is -						
	(1)	(1) Homogeneous contrast enhancement of mass lesion						
	(2)	(2) B/L symmetrical NMLE						
	(3)	Non enhancing mass						
	(4)	Type III curve						
125.	Vacuur	n assisted biopsy in breast is useful, exce	pt -					
	(1)	For biopsy of lesion more than 5mm.						
	(2)	Near complete removal of malignant lea	sion.					
	(3)	Biopsy of microcalcification cluster.						
	(4)	Suspected intraductal papillomas.						
126.	A mult	ilocular cystic lesion with expansile sca	llope	d margins is seen lying adjacent to the left				
	lower f	first molar on an OPG of a 30-year-old	man.	The cyst has thin septated margins and the				
	root of	the molar is absorbed. What is the likely	diagn	osis?				
	(1)	Brown tumor	(2)	Metastasis				
	(3)	Dentigerous cyst	(4)	Ameloblastoma				
127.	All are	features of MEN 1 syndrome, except -						
	(1)	Hyperparathyroidism	(2)	Pancreatic tumors				
	(3)	Pituitary tumors	(4)	Pheochromocytoma				
128.	Most p	referred agent used in vertebroplasty is -						
	(1)	PMMA	(2)	Coils				
	(3)	PVA	(4)	Microspheres				

- 129. In contrast to digital radiography, all are true, except -
 - (1) The detector plate acquires a digital image without having to be physically taken to a scanner.
 - (2) Direct digital radiography systems use amorphous silicon Thin Film Transistor (TFT) arrays.
 - (3) Indirect system use a phosphor to absorb X-rays and release light photons which produce the image.
 - (4) Digital radiography is more expensive than computed radiography.

130. Regarding the Compton effect -

- (1) A photo electron is ejected in a collision with a photon.
- (2) The free electrons described in Compton scanner are often bound within the valence shell of atoms.
- (3) The probability of Compton effect is proportional to the atomic number (Z) cubed.
- (4) The mass attenuation coefficient for the Compton effect for bone is twice that of soft tissue.

131. Concerning MR angiography -

- (1) On a SE sequence, slow flowing blood appears dark (flow-void).
- (2) In GRE flowing blood appears bright only after administration of intravenous gadolinium.
- (3) Pulsatile movement artefact is most apparent in the phase-encoding direction.
- (4) Vessel calcification will produce a high signal which can mask a stenosis.

132. Regarding quality assurance, all are true, except -

- (1) The installer on RPA can complete the critical examination of new equipment.
- (2) Tests on all equipment, annually at least are mandatory.
- (3) Requires the equipment used for testing to be calibrated.
- (4) Is a requirement under IRMER 2000.

133.	Most c	ommon indication for stereotactic biopsy is -
	(1)	evaluation of microcalcification in breast.
	(2)	for evaluation of small lesion of breast.
	(3)	to assess asymmetry.
	(4)	to assess accessory breast malignancy.
134.	Which	projection is used to demonstrate both sphenoidal and posterior ethmoidal air sinuses?
	(1)	Submento-vertical
	(2)	Vertico-mental
	(3)	Anterior oblique
	(4)	Occipito-mental
135.	True se	equence regarding the steps of bottom up Evidence Based Practice (EBP) -
	(1)	$Ask \rightarrow Search \rightarrow Apply \rightarrow Appraise$
	(2)	$Ask \rightarrow Search \rightarrow Appraise \rightarrow Apply$
	(3)	$Ask \rightarrow Apply \rightarrow Search \rightarrow Appraise$
	(4)	$Ask \rightarrow Appraise \rightarrow Search \rightarrow Apply$
136.	Veloci	ty of ultrasound in tissue is affected by all, except -
	(1)	frequency of ultrasound
	(2)	temperature
	(3)	tissue compressibility
	(4)	tissue density
137.	BGR a	rtefact is seen with -
	(1)	Doppler USG
	(2)	Elastography
	(3)	MRI
	(4)	CT scan
[117	<u> </u>	D
[11]	\blacksquare	Page 23 of 32

- 138. Split notochord syndrome occurs due to -
 - (1) Abnormal persistent connection between dorsal ectoderm and ventral endoderm of embryonic disc.
 - (2) Persistent connection between dorsal ectoderm and ventral mesoderm of embryonic disc.
 - (3) Persistent connection between mesoderm and endoderm of embryonic disc.
 - (4) None of the above
- 139. Which of these features can differentiate meningioma from paraganglioma within the posterior cranial fossa?
 - (1) Meningiomas typically results in hyperostosis of adjacent bone, whereas paragangliomas do not.
 - (2) Paragangliomas may extend through the jugular foramen, whereas meningioma do not.
 - (3) Paragangliomas may have internal calcification, whereas meningiomas do not.
 - (4) Meningiomas typically result in an early arterial contrast blush with rapid washout, whereas paragangliomas do not.
- 140. Which area in the brain is most involved in X-linked adrenoleukodystrophy in children?
 - (1) Frontal lobe
 - (2) Corticospinal tract
 - (3) Parieto-occipital lobe
 - (4) Temporal lobe
- 141. Which one of these vascular abnormalities is associated with increased risk of arterial injury during otology surgery?
 - (1) Congenital absence of the ICA
 - (2) Aberrant ICA
 - (3) Persistent trigeminal artery
 - (4) Arterial infundibulum

142. Features of papilledema secondary to increased intracranial pressure include all of the following, except -**(1)** Enhancement of the optic nerve (2) Dilated optic nerve sheath (3) Flattening of the posterior sclera (4) Protrusion of the optic disc into the globe 143. Which one of the following commonly causes oligohydramnios? **(1)** Unilateral renal agenesis Preterm premature rupture of membranes (2) Esophageal atresia without tracheoesophageal fistula (3) (4) Thanatophoric dysplasia 144. Which one of the following is associated with the highest incidence of fetal morphologic anomalies? A poorly-controlled diabetic taking insulin **(1)** (2) A patient taking a beta blocker for control of hypertension (3)A trauma patient with abdominal plain (4)A patient with prior pregnancy with amniotic band syndrome 145. A periampullary duodenal diverticulum compressing the intra-pancreatic part of the common bile duct with resultant upstream dilatation is known as -Lemmel syndrome **(1) (2)** de Quervain's syndrome (3) Hiatus hernia syndrome **(4)** Cowden syndrome 146. A 25-year-old man presents to emergency after trauma with unilateral proptosis, chemosis, reduced visual acuity and a bruit over his right orbit. Gadolinium - enhanced MRI of the orbits shows abnormal contrast enhancement of the right periorbital soft tissues and extraocular muscles. The superior ophthalmic vein is also dilated. What is the most likely diagnosis? Graves' disease **(1)** Carotid cavernous fistula **(2)**

(3)

Orbital pseudotumor

(4)

	(4)	The affected lobe is opaque after birth		
	(3)	Underlying vascular markings are pres	ent	
	(2)	Bilateral involvement is rare		
	(1)	It commonly affects the lower lobes		

147. All of the following are correct regarding congenital lobar emphysema, except -

153.	Which	ch of the following is the most commonly used catheter for an abdominal aortogram?				
•	(1)	Pigtail	(2)	Cobra		
	(3)	Judkins	(4)	RDC		
154.	Modali	ty of choice to diagnose recurrent cervic	al tum	or is -		
	(1)	MRI	(2)	CT		
	(3)	Transvaginal ultrasound	(4)	Transabdominal ultrasound		
155.	On MR	RI (on T1W image) a dermoid cyst can be	e mim	icked by -		
	(1)	Pedunculated fibroid	(2)	Hemorrhagic adnexal cyst		
	(3)	Carcinoma ovary	(4)	Functional cyst		
156.	Medial	deviation of bladder shadow during an	endova	ascular procedure is indicative of -		
	(1)	Contrast nephropathy	(2)	Malpositioned foley's catheter		
	(3)	Evolving retroperitoneal hematoma	(4)	None of the above		
157.	Which	h of the following scenario is a medical exposure?				
	(1)	Exposure to scattered radiation by the patient comforters				
	(2)	Exposure to background radiation				
	(3)	Exposure to stray radiation by the patients waiting at the waiting area				
	(4)	Exposure to scattered radiation by the	adiati	on worker		
158.	Which	ch of the following is incorrect regarding benign cardiac tumors?				
	(1)	Recurrence after excision of papillary f	ibroel	astomas is common.		
	(2)	Rhabdomyomas of the heart typically s	een in	children less than 1 year of age.		
	(3)	Rhabdomyoma is associated with tuberous sclerosis.				
	(4)	Cardiomegaly is the most common rad	iologi	cal finding in patients with cardiac fibromas.		
159.	Which	of the following structures does not pass	throu	gh foramen ovale?		
	(1)	Mandibular nerve				
	(2)	Greater petrosal nerve				
	(3)	Emissary vein				
	(4)	Accessory meningeal artery				

	which of the following is incorrect regarding resions of the jaw:						
	(1)	Ameloblastoma occurs more frequently in the maxilla.					
	(2)	A dentigerous cyst develops around an unerupted tooth.					
	(3)	Dentigerous cysts are associated with basal cell nevi.					
	(4)	Radicular cysts arise in relation to the tooth apex.					
161.	Only to	arsal which is devoid of any muscular at	tachm	ent is -			
	(1)	Talus	(2)	Calcaneum			
	(3)	Navicular	(4)	Cuboid

	(1)	Anterior Cerebral Artery					
	(2)	Middle Cerebral Artery					
	(3)	Posterior Cerebral Artery					
	(4)	Posterior Communicating Artery					
163.	System	temic effect that is common to both acute & chronic inflammation is -					
	(1)	high grade fever	(2)	anaemia			
	(3)	amyloidosis	(4)	lymphadenitis			
164.	Follow	ring is not the function of oestrogen -					
	(1)	Oogenesis					
	(2) (3)	growth of sex organs development of secondary sexual chara	acters				
	(4)	prepares endometrium for implantation		rtilized ovum			
165.	True al	bout Chordoma is -					
	(1)	Most commonly involve skull base.					
	(2)	Women are affected twice as frequently as men.					
	(3)	Skull base chordomas generally affect	older j	population.			
	(4)	These tumors are almost always midlin	e or p	aramedian in location.			
166.	First st	ep in investigation of patient with suspec	eted Si	ub Arachnoid Hemorrhage -			
	(1)	Lumbar puncture	(2)	Non-enhanced CT			
	(3)	CT angiography	(4)	MRI			

167.	In mo	odern image intensifier –				
	(A)	Input phosphor is caesium i	odide			
	(B)	Output phosphor is zinc cad	mium	sulphate		
	(1)	Both statements A & B are t	rue			
	(2)	Both statements A & B are	false			
	(3)	Only statement A is true				
	(4)	Only statement B is true				
168.	Match	n the column –				
		CT artefacts			Cause	
	A)	Motion artefact	1)	miscalibr	ration	
	B)	Streak artefact	2)	heteroger	neous X-ray beam	
	C)	Beam hardening artefact	3)	high dens	sity material	
	D)	Ring artefact	4)	patients r	motion	
	(1)	A-4, B-3, C-2, D-1				
	(2)	A-3, B-2, C-1, D-4				
	(3)	A-4, B-2, C-3, D-1				
	(4)	A-3, B-1, C-2, D-4				
169.	2D T	OF is not used for -				
	(1)	cerebral angiography		(2)	cerebral venography	
	(3)	abdominal angiography		(4)	peripheral angiography	
170.	Not a	n advantage of Time-resolved I	MRA	-		
	(1)	useful for unstable & movin	g pati	ents		
	(2)	better depiction of AVM fee	ders,	nidus & ve	nous drainage	
	(3)	low dose of contest is requir	ed			
	(4)	gives an idea about flow dyr	namic	s of AVM/	AVF & aneurysms	
171.	Not a	n advantage of LCD display me	onitor	s used in P.	ACS over CRT monitors -	
	(1)	light weight		(2)	less power consumption	
	(3)	longer viewing angle		(4)	aspect ratio is maintained

172.	Following molecule best detects bone metastasis in prostate cancer -							
	(1)	FDG	(2)	FLT				
	(3)	FDHT	(4)	TK-1				
173.	Match the columns of PET tracers used in evaluation of dementia with their targets -							
	Radionuclide tracers used in evaluation of dementia Molecular targets							
	A)	F 18 FDG		- Glucose metabolism				
	B)	F 18 FDDNP		- 5HT2A receptor				
	C)	C 11 PiB		- Amyloid plaques				
	D)	F 18 DOPA		- Dopaminergic neurons				
	One of	f these is wrong, which one?						
	(1)	A	(2)	В				
	(3)	С	(4)	D				
174.	First g	generation of modern DEXA scanners use	ed -					
	(1)	pencil X-ray beam	(2)	fan beam				
	(3)	cone beam	(4)	c-arm technology				
175.	Follov	ving is ethically wrong for a doctor -						
	(1)	Advising investigations & procedures	in pat	ients interest				
	(2)	Maintaining confidentiality of patients	infor	mation regarding illness or disease				
	(3)	Promising or guaranteeing a cure						
	(4)	Taking a specialist opinion						
176.	Conce	erning acute ovarian torsion, which one is	TRU	E?				
	(1)	Presents as hyperechoic small ovary w	ithout	follicles.				
	(2)	Majority of patients are postmenopaus	al.					
	(3)	Typically managed medically rather th	an su	rgically.				
	(4)	Commonly associated with ovarian ne	oplası	n or cyst.				
177.	Which	of the following variable is not used in	n Chil	d-Turcotte-Pugh classification of severity of				
	liver d	lisease in cirrhosis?						
	(1)	Ascites	(2)	Serum creatinine				
	(3)	International normalized ratio	(4)	Albumin				
			-					

CO2 aı	ngiography can be used in all the following procedures, except -
(1)	Hepatic vein portography
(2)	Abdominal aortography
(3)	Lower extremity angiography
(4)	Cerebral angiography
A neor	nate with respiratory distress, X-ray showing right side complete opaque hemithorax with
ipsilate	eral mediastinal shift. The CT showing normal left lung and non-visualized right lung with
presen	ce of short blind ending bronchus on right side, so final diagnosis is -
(1)	Pulmonary agenesis
(2)	Pulmonary aplasia
(3)	Pulmonary hypoplasia
(4)	Complete collapse of right lung
Which	of the following statement is true with regards to Dual Energy CT in chest?
(1)	Dual Energy CT is useful in cases of pulmonary thromboembolism.
(2)	Iodine maps may be useful to look for small pulmonary embolism.
(3)	It can quantitatively measure the perfusion in lung parenchyma.
(4)	The pulmonary arteries are better seen at high kV value.
