BLANK PAGE

Note : Attempt all the twenty questions. Each question carries 2 marks. Answer should not exceed 15 words.

1 Why the chain saw is not popular as compared to wire saw ?

2 What is back in the underground excavation ?

3 What are the average percentages of Carbon in wood, peat, lignite, bituminous coal and anthracite ?

4 What are the main factors on which the drilling performance depends ?

5 Which type of shaft is best suited for side pressure and resistance to air current ?

6 What are the methods of mining of placer deposits ?

7 What is the break even stripping ratio in surface mine ?

8 A tyre size used in dumper is $18.00 \times 25 \times 24$. Indicate for what the dimensions are used?

9 What are the advantages of double unit longwall face over single unit face ?

10 Explain slippage in friction sheave hoisting by Tension formula.

11 What is the process of manual testing of roof for support ?

12 What is leaching ?

13 What are the advantages of larger height benches ?

14 What is slot in Underground metalliferous mining ?

15 What is Hydraulic Profile with respect to hydraulic stowing ?

16 What are the thicknesses for very thin, thin, medium thick, thick and very thick ore deposits?

17 What will be the maximum tractive effort developed by a 25 tonne diesel locomotive of 75 KW, if the coefficient of adhesion is 0.25.

18 On what parameters does the head developed by a centrifugal pump depend ?

19 What are main components of cycle time of a shovel ?

20 What is fleet angle ?

27 Explain the principle of Shrinkage stoping.

28 Explain the working of endless rope haulage by use of Screw clips, small man clips, cam clips and lashing chain.

- 29 A 50 tonnes locomotive is connected to a train of 150 tonnes. The train is to be hauled at a speed of 20 km/hr with an acceleration of 0.20 m/s^2 up a slope of 1 in 200. Frictional and other resistances are 70 N per tonne mass. Calculate the power that the locomotive has to develop.

- 30 Draw a longwall face diagram depicting face, stable, tail gate, goaf, strike, dip break line and other important features.

36 What is Blind cut in marble mining ? Explain it in detail and its advantages over other marble techniques.

- 37 A direct haulage is 500 m long and dips at 1 in 4. Coal tubs are hauled up the road in sets of 8, using a rope of 18 mm dia. The tub has a tare of 275 kg and a capacity of 650 kg of coal. What should the weight of rope round stranded with fiber core for the duty? What should be the diameter of the haulage drum ? Maximum speed of the rope is 10 Km/Hr.
