#### **RPSC Paper 2**

#### 1 of 100

100 RPSC\_March-2016\_Paper 2

The correct order of steps for a system development life cycle is

- Analysis, Planning, design, test, document, implement, evaluate.
- Planning, Analysis, implement, design, document, test, evaluate.
- Planning, Analysis, design, document, implement, test, evaluate.
- Analysis, Planning, design, implement, evaluate, test, document.

#### 2 of 100

101 RPSC\_March-2016\_Paper 2

Translating a required task for system development into a series of commands that a computer will be able to understand is

- Project design
- Installation
- Programming
- Systems analysis

#### 3 of 100

102 RPSC\_March-2016\_Paper 2

Designers create system prototypes to

- make the programmers understand how the system will function.
- make the user visualize how the system will look like when it is developed and receive feedback

| 0               | give a demo of the system to his administrating system manager to show as report                                 |
|-----------------|--|
| 0               | make both programmers and user understands how the system will look and function                                 |
| 1.0             | F 100  |

111 RPSC\_March-2016\_Paper 2

Which statement is correct about of testing

It is done only for customer satisfaction that the product is working properly and is optional step.

It is a problem statement which lists specific inputs that are typically expected to be entered by the user and precise output values that a perfect program would return for those input values

It is finalized when the coding is completed

All of these

#### 13 of 100

112 RPSC\_March-2016\_Paper 2

The primary objective of system implementation is i. to build a system prototype

| ii. to train users to operate the system iii. to implement designed system using computers iv. write programs, create databases and test with live data   |

| ii.       | Risk identification        | Ъ. | RMP document  |
| iii.      | Qualitative risk analysis  | C. | Risk register   |
| iv.       | Quantitative risk analysis | d. | Numerical analysis of the project'slikelihood of<br>achieving its overallobjectives |

#### 61 of 100

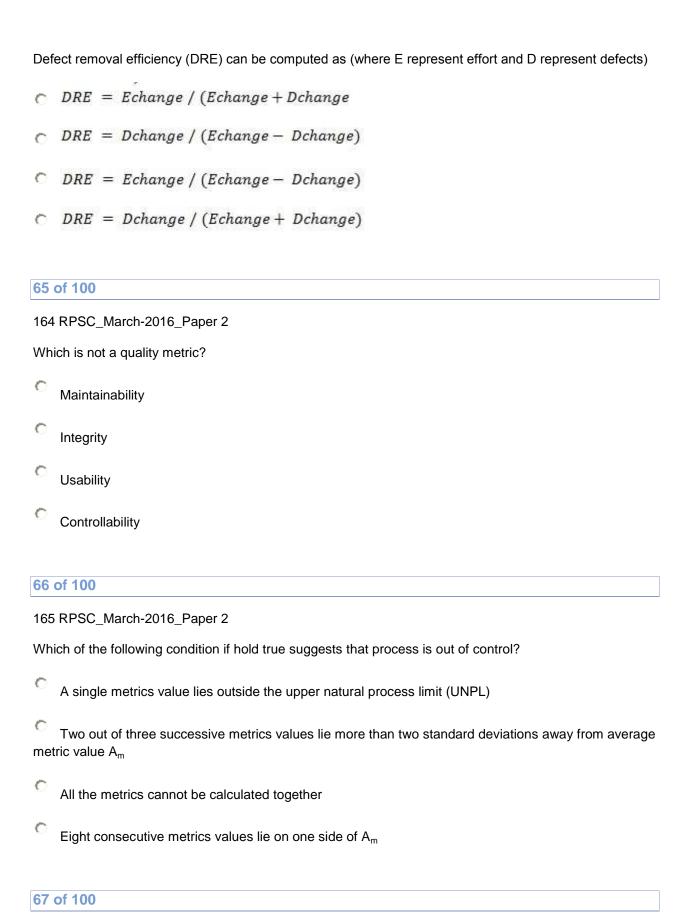

160 RPSC\_March-2016\_Paper 2

Which is not a suitable difference in qualitative and quantitative risk analysis?

Qualitative analysis assesses the likelihood and impact of identified risks to determine whereas quantitative analysis is a way of numerically estimating the probability that a project will meet its cost and time objectives.

| Quantitative risk analysis involves statistical techniques whereas qualitative analysis is found using impact matrix.   |  |
|---|--|
| Qualitative risk analysis generally follows qualitative analysis.   |  |
| None of these   |  |
